

Ep-10. Jo Dikhta Hai, wo Bikta Hai

49

* Sass or Scss \Rightarrow (Not Recommended Way)

\downarrow
(Syntactically Awesome Style Sheets)

Basically, Sass means Writing CSS with some Super power

ways
to
add
css
to
our
project

* Normal CSS or Vanilla CSS:

* Styled-Components \Rightarrow <https://styled-components.com>

* tailwindcss: (TRENDING NOW A DAYS)

* Ant Design:

* Bootstrap:

* Chakra UI:

* Material UI: Give's us pre-build component.

Configure tailwindcss in your project:

\hookrightarrow Framework

\hookrightarrow Parcel

"npm install -D tailwindcss postcss"

"npx tailwindcss init"

\hookrightarrow creates a new file tailwind.config.js

postcss

\downarrow
is a tool which
is used to transform
CSS with Javascript

(tailwindcss uses postcss behind-the-scenes)

postcssrc

configuration file for postcss

```
{
  "plugins": [
    "tailwindcss": {}
  ]
}
```

tailwind.config.js

configuration file for tailwindcss.

```
/* @type {import('tailwindcss').Config} */
module.exports = {
  content: [],
  theme: {
    extend: {},
  },
  plugins: [],
}
```

index.css

```
@tailwind base;
@tailwind components;
@tailwind utilities;
```

importing tailwind into your css file

(Tailwind Offers you className automatically for every CSS, that you want to put in your App.)
